Meteorology 1831.

The design I have in view in this work is merely to notice the changes of weather, wind, heat, and weight of the atmosphere, so as to be able to ascertain the causes and thereby to predict on recurrences of like causes what may be the effect.

ROYAL METEOROLOGICAL SOCIETY
20 JUN. 93

The Weather, at Thwaite, in January 1831.

Day.	January 1831.	Thermometer at 7. a.m.	2. p.m.	8. p.m.

M. 28.	Frosty morng, bright day, storm of hail & snow at 2 pm. wind NW, boisterous. Bar 29.60. Moon bright to night.	33	40	43

This month was very changeable, in every respect, the second week was unseasonable, being altogether hot; the rest of the month generally cold. It is very remarkable that in Devonshire and Wiltshire the snow on the 2nd of this month was accompanied by violent thunder, and vivid lightning at 6-7-8-&9 pm, and most of the Night!. This month produced 15 days only free from rain & snow, or other downfale.

Day.	March 1831.	Thermometer at 6. a.m.	12. m.	3. pm.
	Tuesday March the First.			
	Cloudy with sun, hail at times; wind NW, fresh. Frost in the morng.	33	42	44

--------	vals, wind N W, fresh. Bar 30.09.	55	56	55
--------	5 pm. rain heavier. Bar 30.11. —			
--------	10 & 11 pm, clearer and fine.			

This month till the last week was indeed beautiful, with seasonable heat, and vegetation afforded proofs of it. The Corn looks well and is promising.

The most remarkable incident of the month is, that all garden fruit is uncommonly forward, even so that from the gooseberries we might deem ourselves in the month of August instead of June. —) 20 fine days, no rain of any consequence fell thereon.

Weather at Thwaite, in **July 1831.**

The Month of August 1831 afforded 23 days totally without downfall, a fine and favourable time for harvest, and it was secured in better state than for 5 years past, yet the wheat recieved a great injury by the Mildew.

During July and August much complaining of slight temporary disorders of the Viscera prevailed: Some violent attacks of Influenza or extreme efforts of Nature upwards and downwards, more general among the poor people, greatly accelerated in consequence of excess of aliments during the Harvest toils.

Much drowsiness in a morning and after dinner, with adults, all Summer. Yet as is usual in a fine season there were but few Deaths.

Not a drop of water in the ditches and Rivulets these last 10 days, even where a few years since, the harvest floods appeared – but how widely different this season.

The Weather at Thwaite, in September 1831.

	9 pm Therm. 64°.			

Septr. 1831.

Friday night September 30. 1831.

9 pm, clear above, and hazy clouds below severe lightning S. and SW, afterwards West, — wind ESE, fresh breeze, very hot and sultry notwithstanding, Thermr.— 64° some rain about midnight, thermr.— 62°

The month of Septr. 1831 afforded 23 fine days, it was on the whole a pleasant month, and towards the end it proved altogether hot, it was even a continuation of Summer in Autumn. During the month some slight attacks of the Complaints of August occurred, but no considerable sicknesses prevailed. No epidemic hereabouts these many months past. It is somewhat surprising that in looking on the Landscape this month, orchards appeared stripped of their treasures, and fields so long cleared, turned over and in russet garb seemed to proclaim almost November, and yet the Woods have scarcely began to fade.

The Weather at Thwaite, observed in

October 1831.

Day.		Thermr. at 7.	12.	3.

S. 31.	Bright sun all day, frost morng.	
	& night. wind NE calm. Bar 30.35.	32 37 28

This month although sometimes wet afforded 23 fine days for the rain fell chiefly in the nights.

Remarks on the Year 1831.

The Year 1831 produced 258 fair days which is more than any year has produced since 1826.

In 1831 the finest months were April and July & August. June was a truly beautiful month, destitute of the rains and cold winds which have often sullied the original brightness of the noon of the Year.

The Summer of 1831 was indeed the most genial, uniform, and charming one I ever knew; altho' replete with bright and hot days, yet the heat was never so oppressive and excessive as in some hot summers; and as soon as nature shewed a need of moisture, it was supplied in abundance, and yet not to the other extreme; such was the charming character of the Summer of 1831.

Conclusive Remarks on the Year 1831.

The Coldest day was Wednesday January the 26 th, Thermometer	20°
And the hottest was Thursday July the 28 th, Thermometer	82°

The Greatest Atmospheric pressure was on January the 7 th, Barom.r	30.67
And the least on Dec.r 7 th,	29.04

On February the 4 th it was	29.06
March 23rd	30.53
31st.	30.60
July 7 th.	30.50
October 18 th.	30.54
November 29 th	30.63
December 27 th	30.53

Exit.

	and cold to the feelings.			

Day.	January 1832.	Thermometer at 7.	2.	8.
Su. 29.–	Foggy morng & change to mildness, wind			
	SW, calm, day cloudy with sun, wind			
	NNE, gentle. Bar 30.28. Night cloudy.–	39	46	39
M. 30.–	Cloudy, wind W, gentle. Bar 30.42 & 30.30.	37	43	38
Tu. 31.–	Cloudy, wind SW, calm. Bar 30.12.–	39	45	38
	Dark and overcast night, Barom 29.92.			

This month was remarkably calm, fine, and pleasant, with 27 fine days; the depth of rain was only 463 of an Inch, which I ascertained by a pluviameter, as this month commenced my observations with that Instrument, never before had I used one, but it serves to complete a Register.

Coughs and colds were very prevalent this month, but no considerable sickness in Suffolk. The winter thus far very favourable, and mild, compared with many past!

Day.	February 1832.	Thermometer at 7.	2.	8.
	Wednesday February the First.			
	Cloudy, sun gleaming, wind SE, fresh.			
	Barom. 29.65 to 29.45. New moon 10¼ pm.	34	39	40½

F. 31.	Cloudy with sun; wind W. gentle, sometimes fresh. Barom 29.85.	51	57	65
	Warm, cloudy night. few drops of rain.			

This month ended very wet, but before the 25th, it was a remarkably fine month for harvest, and very hot at times; the number of fine days 21: and the depth of rain 3 Inches & 6 tenths: more than half of which fell after the 24th. The crops are abundant in general, and harvest here would have been ended, had not the last week proved rainy.

No sickness near us this month; One death* from Apoplexy, a middle aged stout man; the 3rd fit!

* Mr Garrod of Eye, Ironfounder, on the 21st.

September 1832.

Day.	September 1832.	Thermometer Lowest in the night past.	Thermometer morning at 9.	Thermometer Highest in the Day.

Su. 30.	Sunday September the Thirtieth. Bright with flying clouds, very light showers at 7 am & 1. & 2 pm. wind SW, fresh. Bar 30.01 to 30.09. Night clear. few clouds.	57½	61	68½

This month was very dry, and remarkably hot at its close, such an instance of intense heat so late in the Year, has never before occurred in the memory of man; the autumn of 1795 comes the nearest to it, and Septr. 1804 was remarkably hot, but not so late as the just past Septr. 1832; last year we considered it hot at the end of September, but this year exceeds all ever before observed! The total depth of rain 65 hundredths of an inch only; and the number of fine days 24; the land is remarkably dry and hard. Very little sickness near us, but the Cholera is raging in town, yet with abated virulence. —

Day	October 1832.	Thermometer: Lowest in the night last	Morning at 7	Highest in the Day
M. 1st.	Bright and hot, flying clouds, wind SW, fresh. Bar 30.20. Cloudy, hot night.	52½	54	69

January 1833.

Day	January 1833.	Thermometer in the night past	at 8.	highest in the day
W. 30.	Cloudy, little rain till noon, wd NW, gentle afternoon fair, mostly bright, wd NNW, Bar 29.72. Sharp frost to night. —	36	37	40
Th. 31.	Hard frost, hazy sky, wd NW fresh, afternoon more hazy & thick, wd SE, gentle. Bar 29.85.	27	28	37
	Night cloudy, little snow at 8 & 9. wind ESE. & frost.			

This month was similar to January last year, being very calm & dry, with 27 fine days, and only half an Inch of rain fell! It was colder than last January, yet very fine & pleasant for the season, and no snow fell, except a few flakes on 30 & 31 Coughs and longstanding colds prevailed with almost every individual, and myself (almost a stranger to such complaints) suffered alike with others through the month, and yet suffer at the moment of registering this, Jan 31st. No serious illness prevails, and deaths very few to be heard of. ——

February 1833.

Day	February 1833.	Thermometer in the night past	at 7.	highest in the Day.
F. 1st.	Overcast with snow, wd E & ENE, fresh, Bar 29.48.) 1pm sky cleared, sun bright. —	32	32½	36

-------	and snow from 2 till 6, wd SE, boisterous.			
(8 &	9 pm, moon bright at times: wd SW, brisk.	34	33	46
	Valleys again inundated. Bar 28.97!			

Day.	February 1833.	Thermometer night past.	6. a.m.	in the Day.

Conclusive Remarks.

It need not be further shewn than by the foregoing pages, that this was an extremely wet and boisterous month, a perfect contrast to last year, there having been only 8 tolerably fine days, or fine between Sun rising & setting, and the depth of rain equalled 5 inches, & 7 tenths! Constant floods in the vales. Not much sickness.

Fr. 31.	Bright & hot, wd E & SE, fresh, Bar 30.36. Clear even^g & night; warmer than last.	39½	51	71½

Observe, Frosty nights & warm days, the last two.

This was the hottest May ever known, and perhaps the driest with us at least.

This month was remarkable for its great heat & drought, there having been 28 fine days, and only .28 of an Inch of rain, or scarcely 3 tenths in the whole month, which is very different to what fell in February, or April. The corn-fields promise little yet, the long wet, and sudden drought having fixed the soil. A complete burst of vegetation took place this month, from extreme backwardness to extreme forwardness; the fruit-trees not generally well blossomed. ———

Catarrhs of last month vanished & little sickness.

Day.	June 1833.	Thermometer night past. Nt	9 a m 9m	in the Day. 6 Day
Saty 1st.	Saturday June the 1st, 1833. — Bright and extremely hot; wd SE gentle; Evening hazy & warm, wd SE, fresh. Bar 30.0.	45	72	80

	Agreeable, and temperate weather. —			

[illegible]

JUNE 1833.

Day		Thermometer night past	9 am	in the Day
Fr. 28.	Bright and very hot, hazy clouds, & small ~~cirro-cumuli~~, wd SE & ESE, very brisk. —	53½	65	74
	Thunder West 6½ pm, shower at 7½ & 8½ pm. Vivid lightning East, 9 & 10 pm. Bar 29.88. —			
S. 29.	Bright with flying clouds, very sultry, wd SW, very brisk; Baromr 29.94. Clear night moon bright; lightning below E & S. wd S. —	57	68	73
Su. 30.	Bright and hot, clouds flying, wd SW, brisk, Bar 30.0. Eveng & night partly cloudy. wd SE & S, brisk, Bar 29.96. few drops of rain at 8½.	54½	65	71½

This month was partly hot and dry, but after the 15th, much rain fell, and the total depth of the month was 3 inches, & 4 tenths. The number of fine days 23. — When I say fine days, I mean fair during 12 hours from 6 to 6. —— The wheat is the only good crop as yet, the heat & drought having checked the growth, even so that the rains have little effect. The prevailing complaints of June were sore throats, and other disorders of the Larynx &c.

Day.	JULY 1833.	Thermometer night past	9 a m	in the Day
M. 1st.	Storm at 5 a.m, day bright at times, frequent showers, wd SW, brisk, Baromr 29.87. Thunder North at 7pm. Clear night & very cool: saw the Eclipse at midnight very perfectly.	51½	59	65

Th. 29.	Bright and very hot, wd SW, gentle, Baromr 30.04 falling. Eveng cloudy & hot. Therm 67 at 8.	54	68	78

August 1833.

Days	August 1833.	Thermometer night past	9 a.m.	in the Day
F. 30.	Full moon 7 a.m. Little shower before 1 morng: day cloudy with sun, wd SW, fresh. Bar 30.0 to 29.80. Rainy evening and night, wd SSE, S, & SW, brisk.	53	60	67
S. 31st	Much rain from 6 till 8 a.m, wd W & NW boisterous, Baromr 28.82! Stormy all day, wd boisterous NW; increased to a strong gale at 7 pm, continued strong all night from NNW; rain at times.	52	49	56

This month was very fine for the harvest till the night of the 30th, before which very little rain had fallen, except during the great tempest of the 25th: yet the weather was unusually cool nearly throughout the month: great heat prevailed on the 27, 28, & 29th days only. The number of fine days 26. and the depth of rain, one inch and nine tenths. Before the tempest only 44 hundredths of an Inch had fallen! – But little sickness. The Wheat crop is thin and short in the straw, as are other crops, yet in many places the Wheat ears are fine and well set. Barley very backward in ripening, chiefly owing to the wetness of April retarding the spr

September 1833.

Days	September 1833.	Thermometer night past	9 a.m.	in the Day
Su. 1st	Sunday September the First, 1833. Cloudy, very little sun, rain at times, wd NW, boisterous; Baromr 29.33 to 29.64. Clearer & more fair after 3 pm; Eveng clear at times, occasional storms. wd decreasing. Bar 29.77.	48	50	55

M. 23.	Fleecy dappled sky hiding the sun this morng till after 9, day bright and warm, clouds at times, wd SE, fresh. Bar 30.0.	50½	59	66
	Evening partly clear, moon bright, wd SSE. White cirrus clouds overhead & Northwd, shews for rain.			

Day	September 1833.	Thermometer night past	9 a m	in the Day
Tu. 24.	Cloudy & sultry, few drops of rain, wd S, boisterous; Baromr 29.54. Clear night, wd SW, dapple sky	52	60	64
	Moon bright, Baromr rise, Thermr 60 at 9 pm.			
W. 25.	Clouds flying, sun at times; wd SW. brisk: Bar 29.89. Heazy night, moon dim.	55	61	67
Th. 26.	Cloudy with sun, wd SSE, fresh, shower at ¼ p 1 pm; afterwards more bright, Bar 29.90. (Thermr 55 at 9.)	53½	58	64
	Hazy & thick sky, eveng & night, calm & warm;			
Fr. 27.	Bright and warm, wd SE, calm, Bar 29.98. Hazy night, Baromr falling.	41½	55	66
S. 28.	Light rain 6 till 9 a m, wd SE, Bar 29.73: afterwards cloudy little sun, wd SE. fresh. Moon bright at 9 pm, full at 11½ pm. Baromr 29.80.	50½	56	62½
Su. 29.	Bright and hot, few clouds, wd SW, gentle; Bar 30.10. Calm & pleasant eve, Bar 30.20.	46	55	67½
	Clear night, moon bright, wd W & NW.			
M. 30.	Bright and warm, wd ESE, calm, sometimes North. Bar 30.37. Night clear above, fog below.	44	57	65½

This month afforded 21 fine days, and the depth of rain was two inches and three quarters: very pleasant at times, much cooler and wetter than Sept: 1832; and but little sickness.

Day	October 1833.	Thermometer night past	7 a m	in the Day
Tu. 1st	Fog till 10, day bright and very warm, wd E, calm. Bar 30.41. Clear moon-light night.	42	46	65½
W. 2.	Fog till 10, day cloudy; sun bright at 11 & till noon only, wd NE, calm: Bar 30.26.	43½	44	60
	Evening & night cloudy and thick, calm & warm.			
Th. 3.	Foggy morng, day cloudy, little sun, wd N NE, & SE, calm. Bar 30.13. Clearer eveng & night.	48½	50	60½
F. 4.	Thick fog till near 9, day bright and hot, few clouds, wd NE. fresh. Baromr 30.24. Clear night wd E.	42¼	45	64½
S. 5.	Cloudy forenoon, bright afternoon, wd E & ESE, fresh. Baromr 30.25. Cloudy, calm & warm night	45½	53	62
Su. 6.	Fog till 8, day very bright, hot in the sun, wd E, gentle. Baromr 30.25. Clear night wd NE.	47	51	63½
	A most beautiful Autumnal Day!			
M. 7.	Very thick fog till after 10 a m, then bright few clouds, hot sun wd NE & ENE, very gentle, Baromr 30.22. Night foggy, very thick at 9.	42½	48	63½

		lightning night.		
Tu. 15.	Stormy morng, day bright; few clouds, wd SW, gentle. Bar 29.28. Evening & night cloudy, wd SSE. Bar 29.10! Rain at 10 & 11 night.	48	48	55

Day.	October 1833.	Thermometer night past	7 am	in the Day.
W. 16.	Cloudy with sun, wd SSW & W, gentle. Bar 29.27 to 29.3 Hazy, thick, & calm night. B. 29.41.	38½	40	51
		lightning 9 pm.		
Th. 17.	Cloudy with sun, very stormy, squalls from the NNW, with rain, wd NNW, variable, strong at noon; finer afternoon, less wd, Bar 29.60. Calm night.	41½	45	54
Fr. 18.	Cloudy with sun, wd NW, gentle, Baromr 29.80 to 29.60. Calm, cloudy, & pleasant night.	41½	42	52½
S. 19.	Bright with few clouds, wd NW, gentle. Bar 29.50. Dense rocky clouds W & S 5 & 6 pm.	44	46	57
	Clear night, wd SE, lightning East.			
Su. 20.	Clear frosty morng, day bright few clouds wd WNW, gentle. Bar 29.83. Clear night.	(roads dusty) 34	35	54½
M. 21.	Overcast morng, day cloudy & very warm, wd SW, brisk, Bar 29.75. few drops of rain.	41	52	60
	Cloudy night, with rain, wd SSW, boisterous.			
Tu. 22.	Cloudy with sun & warm, wd SW, gentle; Bar 29.81. Very thick and cloudy night.	56	53½	62
W. 23.	Heavy rain 6 till 10 am, then bright, clouds flying, wd SE to SW, boisterous, storm and distant thunder from NW at ½ p 4 pm.	52½	53	61
	Fine night clouds and moon-shine. The last three days very mild & sultry.			

Day	October 1833.	Thermometer night past	7 am	in the Day
Th. 24.	Cloudy with sun at times, wd SE, fresh; Bar 29.89. Sultry moonlight night, dappled sky.	43	44	60
Fr. 25.	Bright & very warm, hazy clouds, wd SE, fresh, Bar 29.60. Mild moonlight night. Bar rising.	55	52½	61
S. 26.	Very bright & hot for the season, wd SE, fresh, Bar 29.73. Bright moonlight night.	54	52	62½
Su. 27.	Bright with hazy clouds, very warm, wd ESE, gentle. Bar 30.03. Beautiful night, calm & warm, moon bright, hazy clouds, wd E. B. 29.99.	43½	44	61½
M. 28.	Light shower before daybreak, sultry morng & day, mostly bright till noon, then more cloudy, light shower at 2 pm, wd ESE calm, Bar 29.90. Clear moonlight night, dappled sky, warm & calm. (Full moon)	51	55	63
Tu. 29.	Bright and hot; wd SE, gentle, Bar 29.92. this is perhaps the hottest day ever known at so late a period. Warm, calm, & moon light night.	52	54	64
W. 30.	Fog till 8. day bright and remarkably hot, no cloud, wd veering round & calm, Bar 30.15. Foggy night.	43	45	64
Th. 31.	Thick fog till near noon, afterwards less, but continued, wd SW, calm. Bar 30.10. Cloudy night, wd SW, fresh, few drops of rain. Bar 29.97.	45½	47	55

The Month of October 1833 was remarkable fine & pleasant in general, and the unusual heat of the weather during the last fortnight was surprising!

The depth of rain was 1½ Inches exactly. and the number of fine days 26.

The fall of leaves early on account of the summer winds June 11th & Augt 31st, and perhaps May's heat weakened them equally.

Day	November 1833.	Thermometer night past	7 am	in the Day
F. 1st.	Cloudy & rainy morning, day bright, clouds flying, wd WSW, boisterous, Bar 29.83. great mildness & heat in the air to day. Windy night wd NW.	51	56	62½
S. 2nd.	Mostly bright some hazy clouds, wd SW, brisk. Bar 30.13 to 29.69. Cloudy night, wd Strong at 12.	45	46	54½

Tu. 31. wd SW;	Fine morng till 8, Cloudy & rain till near 2 pm, bright afterwards, wd W, very strong. Bar 29.42. Some clouds to night, wd strong.	41	43	53

The Month of December 1833 was remarkably stormy and mild, with violent winds & frequent rains. The number of fine days 16, and the depth of rain 3·65 inches, or more than 3½ inches considerably.— The greatest cold, or more properly the least heat was on the morning of January 23rd; and the greatest heat of the whole year was on the 17th of May. The two previous days were nearly as hot; and on the 10th of June, and 7th of July the heat was very great, yet the 17th of May exceeded all in my remembrance at such a period of The Year.—

The number of fine days in the whole year was 252;— and the depth of rain 20.96 inches which is nearly 9 inches more than the Year before. The greatest atmospheric pressure was on January 4th, when

the Barom.r was at 30.82; and the least pressure, August 31st, when it was 28.82; making a range of exactly two inches for the Year.

The most striking characteristics of 1833, were the fineness of January; the extreme wetness of February; the backwardness, wetness, & coldness till the end of April, the excessive heat and dryness of May, (being the most sudden transition from one extreme to the other ever known;) the uniform fineness and beauty of most part of the Summer; and the tremendous gales of June 11th, August 31st, Nov.r 28th, and of the month of December!! Few years have passed, exhibiting such uncommon phenomena, in such variety as 1833.

January 1834.

Day.	January 1834.	Thermometer night past.	8 a.m	in the day.
W. 1st.	Sun bright, few clouds flying, w.d WNW, boisterous, Bar 29.87. Clear night.	39	37	42½

W. 30.	Showery, little sun, wd SW, fresh, Baromr 29.63. Night partly clear.	49	52	59

This month proved dry and generally cold for the season, with 23 fair days, and 77 of an Inch of rain fell. Vegetation had made an early start last month and it might then be called a forward Spring; the plum trees being five weeks earlier in blossom than last year; but the cold winds and frosts of this month arrested the bud, and put a complete check to all nature till the last few days. Bad colds & coughs, and general Catarrhal affections were very prevalent all this month. The weather remarkably dry and parching for 12 weeks past.

Day.	May 1834.	Thermometer night past	6 am	in the day
Th. 1.	Thursday May the First 1834, Cloudy, little sun, wd S, gentle, Barom 29.85. Pleasant & warm night.	48	50	62

S. 24.	Very bright, wd NE, brisk, Bar 30.51.	48	54	68
	The weather is still remarkably dry, with			
	parching winds, as well as bright sun!			
Su. 25.	Bright with clouds flying, wd NE, brisk			
	& cold for the season, Baromr 30.43.	47½	51	59
M. 26.	Bright with a few clouds, wd NE, brisk			
	and cool; Bar 30.44.	46½	50	62½
Tu. 27.	Sun bright, wd N, brisk. Bar 30.35.	45	50	66
W. 28.	Bright with flying clouds, wd NNW,			
	brisk & cool, Baromr 30.27.	47	50	62½
Th. 29.	Very bright, wd N, calm, Bar 30.20.			
	Hot in the sun, cool in the shade: sudden			
	breeze from SE, at 4 pm, small clouds pass-			
	ing contrary. Remarkably dry weather.	42	49	68½
Fr. 30.	Cloudy morng till 9, day bright, few			
	clouds, wd NNW, gentle. Bar 30.16.	45½	50	64
S. 31.	Sharp frost early this morng, bright and			
	warm day, wd W, gentle, Bar 30.37. —			
	Clear evening, wd ESE, gentle.	35¼	46	68½

This month was remarkably dry and parching, pastures & corn-fields exhibiting a general short crop.
The fall of rain equalled only ·35 of an Inch in depth, and the number of fine days was 26!
The uncommon drought of the last four months is worthy of remark.

Day	June 1834.	Thermometer night past	9 am	after noon
Su. 1st.	Sunday June the First, 1834.— Bright and very hot, wd SE, gentle, Baromr 30.41. Calm & clear night.	42	64	73½

Sat. 28.	Bright with a few clouds, wd NW till noon; afternoon SW, fresh, Baromd 30.35 to 30.25. Cloudy night wd SE, brisk	46	63	69
	The singing of the birds, has of late been uncommonly harmonious, the little minstrels having piped in the most charming manner, morng, noon, & eveng for some weeks.			

June 1834.

Day.	June 1834.	Thermometer night past.	9 a m	after noon
Tu. 29.	Sun bright, clouds flying, wd E S E, & E, fresh. Clear night, wd E N E. Barom 30.45.)	54½	65	67
Mo. 30.	Bright sun, wd N E, fresh, Bar 30.53, Very hot in the sun cool wd in the shade; Very clear and cool night.	45	64	70

This month was very fine, and great heat at times, springs & lakes exhausted. The depth of rain 1 inch & 66 hundredths, and the number of fine days 25. Although we had a fine rain on the 4th at night, yet so trifling were the showers afterwards, and so parching was the sun at times, that vegetation profited inconsiderably, and the effects of the long drought continued manifest. The crops of hay-grass uncommonly light, and the corn in many places the same; while in others a better prospect than could be expected appeared. Very little sickness, & deaths few.

July 1834.

Day.	July 1834.	Thermometer night past.	9 a m	after-noon.
Tu. 1st.	Cloudy, wd N E, fresh, Bar 30.37; Very little sun, yet pleasant.	44	60	62½

Very hot night 71 at 9. Distant thunder and lightning all night.	59½	73	80

July 1834.

Conclusive Remarks.

The unusual heat of this month from beginning to end, and the parching drought continuing through the greater part of it, serve to render it a memorable July with all who observe the seasons.

Excepting the tempests of the 18th, 27th, & 29th, the fall of rain was not measurable, but with the torrents then the depth equalled 2.44, or not quite $2\frac{1}{2}$ Inches, and the number of fine days 26.

Great distress for want of water, and pastures burnt up to an alarming extent, but the late tempest somewhat allayed the one, and vivified the other. Harvest never before so early in any year as now! The wheat is most excellent & abundant in most places, other corn light in some places, but not so generally as might be expected from the long drought. All the summer fruit so early that none remain unconsumed; the cherries were all off before the end of June!

The nights so uniformly hot this month (particularly the 5th, 7th, 15th, 16th, 20th, 29th, & 31st) that the like has not been known for 26 years before! The Thermr was 70 all the last night of July.

Cherries gathered full ripe about June 23rd, and the currants and gooseberries which hang till Augt 12th in some years, or longer, were all gone by July 15th. 1834!

August 1834.

Day.		Thermometer night past	9 a.m	after noon
Fr. 1st.	Much thunder NNE at 4 this morng, & ESE, at noon & till 2 pm, Excessive heat till noon, somewhat less after 1 pm, bright at times, rocky clouds, calm till 2, then wd ENE, fresh. Bar 29.97. Light shower 1 pm.	Unusual for a night → $66\frac{1}{2}$	77	78

Su. 31.	Bright with flying showers at times; wd SSW, gentle, Baromr 29.87. Calm night and partly clear.	56½	65	68½

This month was fine for finishing the harvest, and like the last two, extremely hot at times. So hot a summer has not been known for many years before: but the effects of the six months drought somewhat vanished from the delightful rains of this month, the depth of rain equalled 3 inches, and 3 tenths (2 inches of which fell in the tempests of the 19, 24, & 26th,) and the number of fine days was 22.

The nights continued unusually hot this month, such an instance of nocturnal heat throughout a summer I never knew or heard of before.

Day.	September 1834.	Thermometer night past	9 a m	afternoon
M. 1st	Cloudy with sun & warm, wd SW, gentle, Bar 30.05. Heavy rain this evening.	54	64	69

Tu. 30.	Cloudy with sun, wd N E, gentle, Barom 30.30. Very clear night.	47	56	64

The Blackberries of the hedge are unusually early fine, and numerous this year, beyond all precedent.

During this Month, the nights & days were often unusually hot, beyond precedent; the depth of rain was 1.37 inch, only; and there were 22 fine days. The grass now become luxuriant from the rains between the 23rd of last and 12th of this month; apples unusually abundant. The springs &c are again exhausted.

October 1834.

Fr. 31.	Cloudy with sun, & pleasant, wd SW, brisk, Barom 30.30 to 30.15.	45½	47	58

This month was very fine and hot till the 15th, afterwards stormy and cold for some days. the number of days fair 24, and the depth of rain 1.27 inches. The distinguishing character of this month, was its unprecedented heat, drought, and calmness at the beginning, which exceed all perhaps on any record!
Great sickness about in most places.

During these last two months the air was swarming with small flies, during the fine days, as thick as to appear like a mist or smoke.

November 1834.

Day	November 1834.	Thermometer night past	7 a m	after noon

M. 29.	Bright with hazy clouds, wd SSE, very brisk gale, Bar 30.39. Cloudy night, and a little rain, wd S. brisk, Bar 30.28.	32	34	43
Tu. 30.	Cloudy and thick, wd SSW, brisk, Baromr 30.07; dark night & drizzle. New Moon 7 am.	40	46	51
W. 31.	Cloudy & gloomy, little rain at times; wd SW, fresh, very mild ever since Monday night, Baromr 29.95.	47	51	54

The Month of December 1834 was unusually dry like the rest of the year, and very open and mild. The number of fine days this month equal to 26! and the depth of rain only ·81 of an Inch, just above 8 tenths! Great scarcity of water up to the end of December, in short there was for the last 11 months!

The very memorable characteristic of 1834 ~~was~~ its unprecendented dryness and heat. We had a continual scarcity of rain from the 29th of January to the end of the Year! Rivers, ponds, and springs never before known so low in winter, as they were in December 1834. they were the same all summer except for a few days after each of the great thunder storms, but soon were those quantities absorbed & evaporated. The long continuance of extraordinary

and great Heat in the Summer and Autumn of 1834, exceeded whatever I have noticed before: and on many days the weather was as hot as in the West Indies! And the heat of the nights last summer 1834, was most surprising.

The Hottest days in 1834 were the 21st of June or Longest day, and the 17th of July: but the 13th of August was nearly as hot. There were no cold days (properly speaking) all the Year, but the coldest was the 24th of December.

The lowest state of the Barometer was on January 10th, when it was 29.21 Inches, and the highest on October 29th, & Decr 11th, 30.72 & 30.70 respectively. Range of the Year — Inches 1.51

The number of fine days in 1834, even equal to 292! and the depth of rain was only 17½ inches! Or to be more exact, just 17.56. This was perhaps the driest year ever known here.—

☞ N.B. When the 11 months drought began, on Jany 28. 1834 at night, the Barometer rose above an inch in 19 hours!!!

January 1835.

Day.	January 1835.	Thermometer night past	8 am	afternoon.
Th. 1.	Cloudy with sun, light showers, wd SW to NNW, gentle, & fresh, Bar 29.96 to 30.61.	48	46	40½

Feb^y 4. Barom^r 30.52
on 20. Do — 29.18
Range of Feb^y — 1.34

This was a very turbulent and stormy month, with some delightful rains, so much (and so long before) needed: — the total depth this month 2 inches & 7 tenths, and the number of fine days 19. — Less sickness than last month. The awful thunder-storm on the 26th, as above, was an unusual occurrence at this season!

March 1835.

Tu. 31.	Cloudy with sun, wd SW, brisk, Barom 29.86. Little rain this evening.	34	36	59

Many large trees were blown down in Essex, about March 16. 1835. and a very large one at East Bergholt.

This month proved very different to what March is wont to be, there being no March-dust till the 24th, although in most years of late, it has been plentiful. — March 1835 was very wet & stormy till the 23rd; the depth of rain 3.328 inches, or near 3½ inches; and the number of fine days 19. The weather was generally cold, and but little start took place in Vegetation.

March 7th Barom 28.91

April 7 & 20th Barom^r 30.53
April 30th 29.63
Range of the Month 0.90

This month was very changeable, even from one extreme to another, some days were quite hot, but the greater part of the month was very cold and even winterly; and vegetation became greatly checked, after a vigorous start had been made. In consequence of these changes the whole animal creation were in a very unhealthy state, particularly Man, and the horse. The depth of rain this month 2.123 inches, or nearly 2¼ inches, and the number of fine days 21.

May 1835.

July 1835.

Conclusive remarks.

This was a very dry and hot month throughout; the total depth of rain being only 4 tenths of an inch, and the number of fine days was 28! The effects of the severe drought are now fast increasing: ditches & ponds dry, pastures burning up, and the land remarkably hard and cracked. Although this month was not (as last July) preceded by 5 other dry months, yet so continual, intense, & parching has been the solar influence all this July, that appearances generally are becoming as alarming as during last summer, this having been the driest July, for 10 years past! The yellow garb of maturity has been suddenly thrown o'er the fields, and harvest is rapidly progressing in hand, and some to the South of us, have carted their wheat. A future report may explain the quality &c of the crops.

Su. 30.	Bright and hot, clouds passing on various tacks, wd E, fresh, Bar 30.12: Ranges of rocky clouds in opposite currents. Clear night.	52½	68	73
Mo. 31.	Bright sun, few clouds. wd E, gentle, Barom 30.19. Very clear night. Lightning E at 8.	47½	60	68

Rain in Aug. 1/8 of an inch, and number of fine days 29.

This month was remarkable for its uncommon heat and drought; the heat being constant, and no rain here till the 25th, to fix the dust: neither had there been a shower since July 13th, till then. The pastures completely seared, and pools &c exhausted. Harvest finished; crops fair in general, in quality & quantity; beans excepted, are a scanty produce. Few garden fruits this summer.

Aug 10. Barom 30.41
25. 29.66
Range of August 0.75

The wheat & barley straw is of a silvery colour this year.

September 1835.

Day.	September 1835.	Thermometer night past	9 a m	in the Day
Mo. 28.	Cloudy with sun, wd W, fresh, Barom 29.58 to 29.67.	49	50	54½
Tu. 29.	Clouds flying, bright at times, wd SW, brisk, Barom 29.75.	45	59	62½
W. 30.	Cloudy, little sun, wd SE, boisterous, rain commenced after 2 pm. wet evening, wind less, Bar 29.34.) 9 pm rain ceased, warm night	52½	61	63

Apples & fruit crops are generally small, as is much found this season, from the dry summer.

This month yielded plentiful rains in due season, which proved most salutary to the burnt sod. The fall of rain equalled 3 inches & 9 tenths, and the number of fine days was 21. This month began very hot, and fine, and the temperature afterwards was tolerably high.

Sat. 31st.	Overcast and much rain all day, wd ESE, Bar 30.0. Fine night.	45	47	49½

This month was very rainy throughout, although we had some fine pleasant hours at times. Near the end of the month the land was quite saturated with moisture, the entire depth of rain being 4.73 inches. and the number of fine days 20, much rain having fallen in the nights. A good seed time between the 13th & 20th. The trees retained their foliage very late this season, very few even among the Ashes, being much stripped!

In the middle of this month the Comet was very conspicuous, most so on the 14th and 18th.

W. 30.	Cloudy, slight drizzles, wd W & NW, fresh, Bar 30.30 to 30.20. Clear night, and hard frost.	38	41	42½
Th. 31.	Hard frost, morng & night, fine day, few clouds, wd NNW, gentle, Barom 30.33. Cloudy night.	27	27	34½

This month was unusually fine and dry, but some severe weather occurred, even more so than for five years past; the number of fine days was 28, and the depth of rain only .175 of an Inch. Scarlet fevers prevalent this Dec.

The Greatest Height of Barometer, or pressure of air in Decr 1835, was on the 23rd and the least on the 1st, as follows.

Decr 1. 1835 –	Barom.	29.53
Decr 23. —		30.61
Barom. Range of Decr —		1.08

Scarlet and other fevers were common during this month, and several sudden deaths from the former, occurred among the young and middle-aged population.

The Highest Barom. was on January 2nd, 30.92! this is unusual! And the lowest on March 7th 28.91, and on October 10th 28.92: making the range for the year just 2 inches, and $\frac{1}{100}$! —

The Greatest heat was on June 11th, 85°, and August 10th, 86°, and the least on Decr 25, & 26th, – 18° degrees!

The number of fine days in the Year 1835 was 274, and the total depth of Rain – 25 inches, and 656 parts of an Inch. July, August, and December were the driest; and March, September, and October the wettest months, in 1835. — The most distinguishing characteristics of the year were the storminess of February and March, the unusually hot and dry Summer, and the wetness of October, followed by a dry December! —
